PROJECT ABSTRACT SUBMISSION

COURSE: ENGINEERING CAPSTONE PROJECT – 1(23IE4053R/23IE4053A) A.Y. 2026 - 2027

TITLE OF THE PROJECT	Student-Exam-Score-Predictor	
S. No.	University ID	Name
1	2420030052	S.Karthikeya
2	2420030342	D.Umesh
3	2420030466	D.Sai Yashwanth
Name of the Guide		B.Prathusha

Abstract

The **Student Exam Score Predictor** is a machine learning-based system designed to predict a student's expected examination score by analyzing various academic and behavioral factors. Student performance can be influenced by several factors such as study hours, attendance, previous examination marks, assignment performance, participation in academic activities, sleep patterns, and other learning-related attributes. The proposed system collects these factors as input and uses data preprocessing, feature selection, and machine learning techniques to identify patterns associated with academic performance.

The system is trained using a dataset containing historical student records and their corresponding examination scores. After preprocessing the data, a suitable machine learning regression algorithm is applied to learn the relationship between student-related factors and exam scores. The trained model can then predict the expected score of a student based on newly provided information. The prediction can help students understand their current academic performance and identify areas that may require improvement.

The main objective of this project is to provide an intelligent and data-driven approach for analyzing and predicting student academic performance. The system can also assist teachers and educational institutions in identifying students who may need additional academic support. By using machine learning for performance prediction, the proposed system aims to support early intervention, personalized learning, better academic planning, and improved student outcomes. The project demonstrates how data analytics and machine learning can be effectively applied in the education domain to make academic performance assessment more informative and proactive.
